

Family Mathematics Festival Table Set Up

Please use this diagram of a typical cafeteria/multi-use room in setting up tables for your Family Mathematics Festival. If you are using a gym instead, the setup of tables is the same. A standard, fold-down double cafeteria table, or alternately, two 6' X 4' folding tables, placed end to end, will be used for ONE Festival station. We will set up at least 12 stations, more if the room allows. 12 Math Festival stations can accommodate up to 150 parents and students, depending on the size of your room. Please have your janitor set up the room with tables the afternoon before, so the Festival set up can begin at least an hour and a half prior to the start of your Family Mathematics Festival.
